

Peacemaker[®] H₂S Converting Dry Air Scrubber

CONVERTING MEDIA TECHNOLOGY | PATENTED

Unlike activated carbon that adsorbs H₂S, our **Patented Converting Media Technology** reacts with H₂S to form a water soluble and non-volatile poly sulfide that is readily biodegradable. In simple terms, gaseous H₂S is turned into a stable liquid polymer - permanently eliminated, not just captured.

KEY BENEFITS

99%+

Average & Peak H₂S Removal

2,000+ PPM

H₂S Loading Capacity

Low Maintenance

No added chemicals, biological agents, or water required

Customizable Solutions

Designed for each wastewater application

Corrosion Control

Protects infrastructure, equipment and instrumentation

Easy Install

Minimal disruption to operations

Cost Effective

Lower lifecycle cost vs. alternatives

Working Together for the Best Odor Control Solutions
